① Let $x(t=0) = \pi/2$
 $x(t) = ?$

② what happens with $x(t)$
as $t \rightarrow \infty$

③ Types of trajectories

-9-

$$\dot{x} = \sin x$$

• Let $0 < x(t=0) < \pi$

$$0 < x(t=0) < \pi$$

$$\dot{x}(t=0) > 0$$

$x(t)$ grows until $x = \pi$, stay at π

• Let $\pi < x(t=0) < 2\pi$

$$\dot{x}(t \neq 0) < 0$$

$x(t)$ will decrease until $x(t) = \pi$, stay there

-10-

- $x(t=0) = \emptyset \Rightarrow x(t) \equiv \emptyset$
- $x(t=0) = \mathcal{I} \Rightarrow x(t) \equiv \mathcal{I}$
- $x(t=0) = m\mathcal{I}, x(t) \equiv \mathcal{I} \cdot m$
 $m = 0, 1, 2, \dots$

x^* is a fixed point

iff $f(x^*) = 0$

For this example $x^* = m\pi$; $m = 0, \pm 1, \pm 2, \dots$

12

-13-

To solve $\dot{x}(t) = f(x(t))$

① Find all fixed points:

Find x^*

such that $f(x^*) = 0$

② Analyze regions between fixed points:

IF $f(x) > 0 \Rightarrow$ flow to the right

— " — $f(x) < 0$ — " — " — left

— " — $f(x) = 0$ stay where you are

14-

Existence and uniqueness
if $f(x)$ is C^1 , continuously
differentiable

$\Rightarrow x(t)$ exists and is

15

Study $\dot{x}(t) = 1 - x^2(t)$
find fixed points analyze
stability, plot $x(t)$

18 Example [same steps]

$$\dot{x} = x - \cos x$$

Find fixed points, analyze stability,
find trajectories.

$x, \cos x$

$x^* = \cos x^*$ - does not have

x^* is crossing of $x, \cos x$ set
